Subject: Muse mind machine

Hi Michael, I've been in possession of the "muse" machine for 3 days now.

I gotta tell ya, what a difference! I work 12 hour nite shifts from 7pm to 8am, 4 days a week. Previously, I was using combinations of caffiene pills and ephedra (or ephidrene) along with copious amounts of "Dr. Pepper" to make it through the nite! Needless to say, not very healthy! The last two nites of work, at lunch time, I would go out into the parking lot, and have a recharge session with my "Muse", in the car. I'm happy to say I made it through both nites sans caffiene and ephedra (still drinkin DP). Gonna work on THAT next.

Do you all have distributorships? I believe I could sell these things! I gave a short demo to a couple of my co-workers. They were pretty much awestruck. We work at a Motorola Fab as customer engineers. So I was rather surprised that none of them had ever heard of, or been exposed to bio feedback.

Thanks for being so helpful and professional on the phone. I am very pleased with this unit. and am glad I made the "leap" to purchase a mindmachine,

Sincerely, Chuck Attaway
